PROJECT DESCRIPTION

Bartels'Harley Davidson (BHD) plans to construct an underground parking facility at 4141 Lincoln Boulevard, Marina Del Rey. Dewatering of groundwater is anticipated to occur during the construction activities. BHD proposes to store the extracted groundwater in a settling tank. The groundwater will then be treated by passing it through two filtration units to remove suspended solids, and then by passing it through granular activated carbon units in series to remove organics. Post treatment water samples will be taken for analyses prior to discharge.

VOLUME AND DESCRIPTION OF DISCHARGE

BHD will discharge up to 576,000 gallons per day of treated groundwater. The groundwater will be discharged to storm drain located at (Latitude 33°59' 17", Longitude 118° 26'44"), which drains to the Pacific Ocean, a water of the United States. The site location and the schematic of waste flow diagram are shown as Figures 1 and 2, respectively.

FREQUENCY OF DISCHARGE

The discharge is scheduled to begin in May 2003. The project is anticipated to last for approximately five months.

REUSE OF WATER

Due to lack of landscaped area at the site, there are no feasible reuse options for the discharge. Therefore, the treated groundwater will be discharged to storm drain.
